

NEW: FUEL LINES

The fuel is distributed from the tank to the engine through a large number of lines. In order to resist an operating pressure of up to 7 bar, the fuel lines have to meet high requirements on this way.

They can become porous and cracked over time due to the constant stress and/or the material; but environmental influences or marten bites can also lead to a leaking fuel line. Leaking fuel lines represent a risk in road traffic.

- **from now on in the Metzger program with approx. 150 references**
- **tested safety and quality**
- **available from stock**

**METZGER FUEL LINES:
BEST QUALITY FOR MAXIMUM SAFETY**
